We design innovation_ PROGETTIAMO INNOVAZIONE

Nato nel 1978, Elmar è oggi un brand italiano dinamico, la cui identità è riconosciuta a livello internazionale. Per Elmar il cambiamento è progresso e il progresso è miglioramento della qualità della vita.

La nostra passione è progettare, realizzare e commercializzare soluzioni d'eccellenza per gli ambienti cucina e bagno. In un mondo in continua evoluzione in termini di materiali, know-how e ricerca della qualità e del bello, abbiamo sempre risposto accettando sfide quotidiane e proponendo soluzioni innovative e di pregio, rivolte ai giovani così come alle persone di esperienza. Per anni abbiamo innovato lavorando sulle potenzialità dello "spazio cucina" e abbiamo progettato sistemi in movimento nella convinzione che la cucina debba essere un ambiente flessibile, da vivere nelle varie fasi della giornata: con i nostri tavoli a scomparsa o con le nostre colonne attrezzate moltiplichiamo lo spazio disponibile per la preparazione e l'ospitalità. Le lunghe cooperazioni con architetti e designers hanno generato idee, linee e prodotti capaci di dialogare con qualsiasi soluzione architettonica e di spazio. In particolare, negli ultimi anni, con lo studio C+S Architects abbiamo spostato l'attenzione dall'oggetto cucina ad un sistema di relazioni con lo spazio, progettando e realizzando programmi capaci di reinventare la casa attraverso una serie di nuove connessioni tra gli ambienti.

.e

Founded in 1978, today Elmar is a dynamic Italian brand recognised the world over. For Elmar, change means progress and progress means improving quality of life.

Our passion is for planning, making and selling excellent solutions for kitchens and bathrooms. In a world which is continuously evolving in terms of materials, know-how and research into quality and aesthetics, we have always replied to the challenge of day-to-day life offering innovative and sought-after solutions, designed for the young as well as the more experienced. For years now, we have innovated by working on the potential of the "kitchen space", and we have designed moving systems, convinced that the kitchen should be a flexible environment, to be lived in at various times of the day: with our hide-away tables or with our fitted columns we multiply the space available for preparing or hosting. Long-standing collaboration with architects and designers has generated ideas, ranges and products that can match any architectural solution or space. Over the last few years in particular, in partnership with C+S Architects, we have married the attention to the kitchen object to a space-relation system - designing and making programmes able to re-invent the home through a series of new connections between spaces.

We take care of details and customize solutions_

CI PRENDIAMO CURA DEI DETTAGLI E DELLE SOLUZIONI PERSONALIZZATE

Offriamo un'ampia e ricercata gamma di materiali che spazia dai laminati effetto seta all'argilla, dalle laccature opache a quelle lucide, dalle finiture metalliche ai legni pregiati e al gres.

Tutte le nostre proposte sono personalizzabili e intendono superare la contrapposizione tra industria e produzione artigianale. Infatti i vari componenti, anche se prodotti industrialmente, sono personalizzabili nelle dimensioni e nelle finiture e restituiscono la memoria di un'atmosfera accogliente in cui il dettaglio è curato come se fosse stato fatto a mano. L'expertise quarantennale di Elmar nella realizzazione delle cucine coniuga design e funzionalità del prodotto con la maestria artigianale italiana.

Prodotti che durano, studiati per soddisfare ogni tipo di esigenza.

.e

We offer a wide and sought-after range of materials, from laminates with effects from silk to clay, opaque and matt varnishes, metallic and precious wood finish as well as stoneware.

Our entire offering is customisable and are designed to go beyond the overlap between industrial and artisan production. Indeed, the various components, even if industrially produced, can be customised in terms of size and finish and evoke the memories of a welcoming atmosphere in which the attention to detail is comparable to a hand made piece. Elmar's over 40 years' experience in making kitchens marries design and functionality of the product with masterful Italian hand crafts.

Products that last, designed to satisfy any requirement.

We create family atmospheres_

CREIAMO ATMOSFERE FAMILIARI

Desideriamo trasformare la cucina da macchina funzionale in spazio da abitare, costruendo l'atmosfera e le relazioni tra lo spazio e i suoi abitanti, per farli stare bene, a casa.

Così come la famiglia è un insieme affascinante, complesso e in costante divenire, la cucina deve interpretare ed esprimere le abitudini, le tradizioni e le aspirazioni legate alla storia e alla cultura personali ed essere un'abile trasformista, deve saper accogliere dalla situazione più intima alla più formale. Per questo motivo non consideriamo la cucina come un sistema predefinito (dato) di elementi ma come una serie di soggetti che fluttuano nella memoria e attendono di essere interpretati: un grande tavolo o un'isola per stare bene insieme a gustare, parlare, preparare, guardarsi; un fuoco attorno a cui sedersi e lavorare, una libreria dove collezionare libri e oggetti preziosi, una credenza elegante e flessibile, una cappa che trasforma il cibo in musica.

.e

We want to transform the kitchen from a functional machine into a living space, by creating an atmosphere and a relationship between the space and its inhabitants, making them feel well, at home.

Just as family is a fascinating togetherness, complex and constantly evolving, the kitchen must interpret and express habits, traditions and ambitions linked to personal history and culture and be able to transform, welcoming every situation from the intimate to the formal. For this reason, we don't consider the system as a pre-defined system (given) of elements but as a series of items that float in the memory, waiting to be interpreted: a large table or an island to be together and eat, talk, prepare, look at each other; a fire to sit around and work, a bookcase to collect books and precious objects, an elegant and flexible cupboard, an extractor hood that transforms food into music.

Atmospheres_ ATMOSFERE

.elmar Kitchen Philosophy

“Chi ha detto che quello che è piacevole non può anche essere funzionale?”
Charles Eames.

Kitchen Philosophy è un sistema di potenzialità per creare atmosfere. Intercetta le memorie della cucina: uno spazio ricco di materie, gusto e profumi, di calore della casa e della famiglia, uno spazio informale dove lavorare e condividere il cibo e la conversazione, in cui ognuno di noi si sente ‘a casa’.

Sospesa tra tradizione e innovazione, Kitchen Philosophy è una selezione di suggestioni piuttosto che un catalogo di sistemi chiusi: prende forma nelle memorie della cucina, utilizzando le tecniche più sofisticate che il mercato della produzione mette a disposizione e spingendo il progetto oltre le mura della cucina per estenderlo a tutta la casa.

Kitchen Philosophy supera l’idea della cucina o del bagno come macchine superfunzionali e specializzate per proporre **atmosfera da abitare**.

Frammentando le componenti principali del sistema, la cucina si trasforma magicamente in spazio dove le **armadiature** diventano muri abitati che emanano bellezza nella preziosità delle finiture esterne, ma che mostrano altre potenzialità di funzionalità e materialità quando si aprono, rivelando pensili, fuochi, scaffalature, cotture e zone lavaggio, che sono di volta in volta customizzabili per adattarsi ai desideri degli abitanti.

Le **isole** diventano un grande **tavolo** da lavoro, un fuoco attorno al quale conversare, sedersi, lavorare. Lo spazio è disegnato da **librerie** dove raccogliere gli oggetti preziosi o il profumo delle spezie. Le **cappe** possono essere invisibili e alloggiare nei piani o diventare un organo, una vibrazione luminosa e sonora, che si materializza nella sequenza dei cilindri di dimensioni diverse, che contengono l’aspirazione insieme alle casse acustiche. Kitchen Philosophy istiga *“La relazione tra l’oggetto e il suo utilizzatore come una relazione di intense interazioni”* (Arnheim), in attesa di potersi modellare ai desideri degli abitanti.

Kitchen Philosophy si ricompone nei vari elementi non più come sistema dato, ma come possibile intonazione di un coro di voci che ciascuno dei materiali canta secondo l’intonazione di ogni abitante che diventa protagonista della propria atmosfera in casa e inizia a giocare trasformando le potenzialità in spazio.

.elmar Kitchen Philosophy

“Who said that what is attractive cannot also be functional?”
Charles Eames.

Kitchen Philosophy is a system of potential choices to create atmospheres. It captures the memories of the kitchen: a space filled with materials, taste and fragrances, the warmth of the home and the family, an informal space in which to work and share food and conversation, in which each of us feels ‘at home’.

Suspended between tradition and innovation, Kitchen Philosophy is a selection of proposals rather than a catalogue of closed systems: it takes shape in the memories of the kitchen, using the most sophisticated techniques that the production market has to offer, pushing design beyond the walls of the kitchen to extend it to the entire house.

Kitchen Philosophy surpasses the idea of the kitchen or bathroom as super-functional and specialised machines to offer instead **atmospheres to be lived in**.

By fragmenting the main components of the system, the kitchen magically transforms itself into a space where the **cupboards** become inhabited walls that exude beauty in the preciousness of the exterior finishes but which show other potential functionalities and materiality upon opening, revealing shelves, rings, units, hobs and washing areas, which are customisable on an individual basis to suit the tastes of the inhabitants.

The **islands** become a large work **surface**, a focus around which to converse, sit and work. The space was designed like a **bookshelf** in which to collect valuable objects or the fragrance of spices. The **hoods** can be invisible, accommodated in the hobs, or become an element, a luminous and audible vibration, that materialises in the sequence of cylinders of different sizes, which contain the extracting function together with the sound-enclosing units.

Kitchen Philosophy instigates *“The relationship between the object and its user as a relationship of intense interactions”* (Arnheim), waiting to be modelled on the wishes of the inhabitants.

Kitchen Philosophy is recomposed in the various elements no longer as a given system but as possible intonation of a choir of voices that each of the materials sings according to the intonation of each inhabitant who becomes the protagonist of their home atmosphere and begins to play, transforming the potential options into space.

Wing Table_

WING TABLE

Wing table appartiene alla famiglia delle soluzioni esclusive Elmar.

A sorpresa il pannello sul retro dell'isola o della penisola può ruotare dal basso verso l'alto e trasformarsi in Wing table, un tavolo profondo 64 cm che risolve all'occorrenza le funzioni di preparazione e accoglienza.

Aperto appare come un piano di soli 3 cm di spessore e lascia a vista lo schienale in acciaio dell'isola mentre chiuso il suo spessore scompare

all'interno della profondità del fianco dell'isola.

Wing table può essere lungo 120, 150, 180, 210, 240 cm in Unicolor, acciaio o in legno pregiato.

The Wing Table belongs to the exclusive Elmar solutions family.

The panel on the back of the island or peninsular can rotate from underneath

to the top and transform into a Wing Table, a table 64 cm deep that can solve any issue of space when preparing or entertaining in a flash.

When open, the surface is only 3cm thick and leaves the steel back of the island on show, whereas when closed the thickness is hidden inside the depth of the side of the island.

Wing Table can be 120, 150, 180, 210, or 240 cm long in Unicolor, steel or precious wood.

ARMADIATURE CON ANTE RIENTRANTI PER INTEGRAZIONE CON MODULI INTERNI

Si tratta di eleganti e funzionali armadiature che trasformano lo spazio cucina in zona living in cui ricevere e sorprendere gli ospiti: sono infatti la soluzione perfetta per far scomparire le zone tecniche della cucina.

Tutto è doppio per arredare, divertire, intrattenere, per cucinare e poi nascondere. Ad ante aperte infatti compaiono le colonne dedicate ai forni, ai piccoli elettrodomestici, alle zone lavaggio e/o operative in genere. Molteplici sono le combinazioni possibili per la zona interna: dalle più semplici ottenute con i soli ripiani a vere e proprie composizioni preziose complete di basi, pensili, boiserie, luci interne, ecc.

Ad ante chiuse tutto appare immediatamente in perfetto ordine. I componenti tecnologici di alta

qualità agevolano la funzionalità di questa soluzione che permette di far scomparire nei fianchi le ante aperte e di non ostacolare l'operatività di chi sta cucinando. L'ampia scelta di maniglie abbinata alla disponibilità delle molteplici finiture permette il loro facile inserimento in progetti dai diversi mood.

These are elegant and functional cupboards that transform the kitchen space into a living area in which to surprise your guests: they are the ideal solution to hide away working areas of the kitchen.

Everything is doubled to furnish, enjoy, entertain, cook and hide. With the doors open, the oven and small appliance,

sink and operational areas in general are on show. There are many possible combinations for the internal area: from the most simple, obtained by using only shelves, to more complex compositions complete with bases, shelves, wood panels, internal lights, etc.

With the doors closed, everything is tidied away immediately.

The high quality technological components make for easy use of this solution, which allows the open doors to be hidden away and not hinder the movement of busy cooks. The wide range of matching handles available in the many finishes allow them to be easily inserted into many different mood projects.

Sliding Table_

SLIDING TABLE

Sliding Table è un brevetto tecnico Elmar registrato e certificato catas per 30.000 cicli di apertura con 50 kg di carico uniformemente distribuito.

Si tratta di un tavolo che può scorrere lungo tutta la composizione e in posizione di riposo scompare al di sotto del normale piano di lavoro oppure nell'apposito vano creato a colonna, lasciando a vista solo la sporgenza necessaria per la presa maniglia.

E' composto da un fianco dotato di ruote con freno e da un piano di lavoro disponibile in due profondità fisse

(59-74) e con lunghezza progettabile a misura fino ad un massimo di 160 cm.

E' disponibile nelle finiture: acciaio scotch brite, acciaio wirbel steel, e in lamiera verniciata bianca.

Sliding table is an Elmar technical patent, Catas registered and certified for 30,000 opening cycles with a uniformly distributed load of 50 kg.

This table can slide along the entire kitchen composition and when it's in

the resting position it disappears under the normal worktop or in the designated column compartment, thus leaving only the protrusion required for the handle.

It consists of a side equipped with wheels with brake and a worktop available in two fixed depths (59-74) and with a length designed to measure up to a maximum of 160 cm.

It is available in the following finishes: Scotch Brite steel, Wirbel steel and white painted sheet.

Island 0_

ISOLA 0

Quando le cucine sono aperte alla convivialità si distinguono per il design, per la funzionalità e per l'estrema qualità dei materiali.

La forza espressiva dell'isola 0 nasce dalla ricerca della semplicità raggiunta attraverso un lavoro di sottrazione e semplificazione senza nulla togliere alla funzionalità.

La tecnologia ci permette oggi di lavorare l'acciaio in spessori minimi sia in verticale che in orizzontale, di integrare perfettamente lavello e piano cottura e di poter scegliere tra finiture con molteplici effetti tattili.

When kitchens are open for conviviality they are distinguished by design, usability and for the extremely high quality of materials used.

The expressive force of Isola 0 is born from the quest for simplicity, achieved by taking bits away and simplifying without harming usability.

This technology allows us to work the steel to minimal thickness, both vertically and horizontally, perfectly integrating the sink and hob whilst choosing from the many finishes and surfaces.

La tecnologia è stata integrata nella forma fino a diventare invisibile: così sono nate le sottilissime ma estremamente resistenti mensole della nostra boiserie.

Si tratta infatti di mensole in alluminio con spessore a vista di 8mm, elegantemente raggiate sugli spigoli e abbinabili agli schienali disponibili in oltre 200 varianti di finiture, dal decorativo al laccato opaco e lucido, dal legno pregiato alle molteplici finiture acciaio.

Ideali per arredare anche gli spazi living attigui alla cucina, si distinguono per l'elevata qualità, la durevolezza e l'eleganza formale.

Possono essere utilizzate per arredare intere pareti, per essere integrate ai pensili o per impreziosire il retro di un'isola o di una penisola.

This technology has been integrated into the design so as to become invisible: and so our extremely thin but resistant wood panel shelves are born.

They are in fact aluminium shelves with a visible thickness of 8mm, elegantly shining on the edges and can be paired with the backs available in over 200 finishing variants, from decorative to opaque and matte varnish, to precious wood and the many steel finishes.

Ideal for furnishing living spaces around the kitchen, they are notable for their high quality, durability and formal elegance.

They can be used for decorating entire walls, for integrating with shelves or for embellishing the back of an island or peninsular.
